The changing face of skin lightening practices in India

The language around skin lightening has changed, but the desire for it has remained strong in India. A lot of the advertisement and marketing has now moved online, the country needs strong legislation, campaigns to educate patients, pharmacists and healthcare professionals, and a conversation that shifts the focus to skin health, not colour

Monisha Madhumita

The language of fairness may be changing, but the desire for lighter skin has not necessarily disappeared in our country. As skin-lightening practices move into skincare, dermatological procedures and digital spaces, the health consequences are becoming increasingly harder to recognise and regulate.

Skin lightening in India is changing. The fairness creams that once dominated advertisements are less visible today. The language around them has also shifted. Words such as 'brightening', 'glow', 'de-tan' and 'even tone' are now common across skincare products and digital platforms.

For dermatologists, this change is increasingly visible in clinical practice. Patients may not come to the clinic saying that they have been trying to become fairer. They often present because something has already gone wrong. There may be acne, redness, thinning of the skin, increased facial hair, pigmentation or infections. Oral agents used with the expectation of achieving lighter skin are also being sought.

"We see patients because of the side-effects of what they have tried, and then work backwards," says Radhika Sarkar, head and director - professor, department of dermatology, Vardaan Mahaveer Medical College and Sankarjung Hospital, New Delhi.

The profile is changing too. What was once viewed largely as a concern among women is now also seen among men, teenagers and transgender persons. This makes skin lightening an important skin health issue, rather than simply a cosmetic concern.

Not all treatment that reduces pigmentation is skin lightening. Melasma and post-inflammatory hyperpigmentation are common pigimentary disorders. They can be persistent and distressing, particularly in darker skin tones. These conditions may require treatment. The important distinction, Dr. Sarkar says, is between treating a pigimentary disorder and attempting to lighten a person's normal, constitutive skin colour. This distinction is becoming less clear to consumers.

A product described as 'bleaching' may be intended to reduce pigmentation, improve texture or make the skin appear more even. The terms itself does not explain what is being changed.

For clinicians, the distinction should remain on skin health. Brighter-looking skin can follow better photoprotection, appropriate skincare, control of inflammation and improvements in general health and lifestyle. None of these requires changing a person's natural skin colour.

Digital shift

The larger change is taking place online. Skin lightening messages are no longer limited to television advertisements or product packaging. They are increasingly delivered through influencers, e-commerce platforms, before-and-after photographs and social media.

Need for regulation: Skin-lightening messages are no longer limited to television advertisements or product packaging. They are increasingly delivered through influencers, e-commerce platforms, before-and-after photographs and social media. (NTV/ANSA)

Algorithms can amplify these messages. A person who watches one video on pigmentation may subsequently be shown repeated content around lightening products, supplements, pills or procedures. Filters and image manipulation add another layer. Photographs can be altered to make skin appear lighter, smoother or more uniform. Artificial intelligence can make these alterations increasingly difficult to recognise.

Dr. Sarkar believes public education, must therefore, also address digital literacy. People need to learn to recognise filtered or manipulated images and to question the aesthetic standards repeatedly presented to them online. The impact is particularly relevant for younger users. Repeated exposure can gradually alter what is perceived as normal skin and what is considered a problem requiring correction.

Excessive treatment

The growth of aesthetic clinics are has also widened the number of places where people seek treatment.

Patients may move between dermatology clinics, aesthetic centres, salons, spas, social media and online marketplaces. The distinction between medical treatment and cosmetic marketing can become unclear.

Dr. Sarkar stresses that pigimentary disorders should be assessed by qualified dermatologists. Procedures also need to be selected carefully and patients should not be overtreated. This is particularly relevant in darker skin tones, where inflammation caused by aggressive treatment can itself lead to further pigmentation. The treatment can then become part of the problem.

There is also a role for clinicians in managing expectations. Not every variation in skin colour requires treatment. Unregulated over the counter

skin lightening products should be avoided and unrealistic expectations need to be addressed early.

The health consequences can be significant. The International League of Dermatological Societies (ILDS) has warned that the misuse of potent topical corticosteroids in skin bleaching products can contribute to treatment-resistant fungal infections, irreversible skin damage and systemic side-effects. The organisation has called for stronger regulation, clearer guidance and better public education.

Beyond the clinic

The response to skin lightening therefore also needs to change.

Traditional awareness campaigns remain important, but they may no longer be sufficient when much of the contemporary conversation is taking place online. This is a particular focus of the ILDS Strategic Working Group on Skin Bleaching. The group brings together international dermatology expertise to address harmful skin-lightening practices while also recognising the legitimate need for safe, evidence-based treatment of pigimentary disorders.

The message, says Dr. Sarkar, who is part of the working group, needs to reach people where these practices are now being discussed and promoted. "We need to leverage social media and amplify the message," she says. This includes closer collaboration between the ILDS and national dermatology societies, as well as engagement with pharmacists, educators and credible public voices.

India has previously seen organised campaigns around inappropriate plastic surgery and a clearer understanding of education of both patients and pharmacists. A similar approach is now needed for contemporary skin-lightening practices.

The ILDS initiative also has a wider

aim: to move the conversation away from skin colour as an aesthetic liability and towards skin health. The message is simple, but important. Healthy skin exists in every shade.

For those experimenting with skincare routines, particularly skin lightening, it means understanding the difference between a pigimentary disorder and normal skin colour. It means recognising that medicines used without appropriate supervision can damage the skin. It means knowing that repeated procedures are not always better treatment.

Increasingly, it also means understanding that the images seen online may have been filtered, lightened or otherwise altered.

Regulation will need to evolve alongside this change. Looking only for products explicitly labelled as 'fairness' products will miss part of the contemporary market. Claims, ingredients, digital advertising, influencer marketing and access to potent medicines all require attention. But regulation alone cannot address the deeper issue.

Greater awareness has made overt fairness advertising less acceptable. Yet,

as Dr. Sarkar points out, social perceptions around skin colour continue to persist. The challenge is therefore no longer only the fairness cream. The people seeking these interventions are also changing. The response now needs to change with them.

For dermatologists, professional societies and public health organisations, the opportunity lies in moving beyond treating complications after they occur. The focus must be on prevention, evidence-based care, digital education and a clearer understanding of what healthy skin actually means.

THE GIST

As skin-lightening practices move into skincare, dermatological procedures and digital spaces, the health consequences are becoming increasingly harder to recognise and regulate.

For clinicians, the focus should remain on skin health. Brighter-looking skin can follow better photoprotection, appropriate skincare, control of inflammation and improvements in general health and lifestyle. None of these requires changing a person's natural skin colour.

There is also a role for clinicians in managing expectations. Not every variation in skin colour requires treatment. Unregulated over the counter skin lightening products should be avoided and unrealistic expectations need to be addressed early.

Salmonella infections: why India needs to look beyond typhoid and diarrhoea

Athira Elasa Johnson

Salmonella is often linked to food poisoning, diarrhoea and typhoid, but the infection can range from mild gastroenteritis that gets better on its own to a serious bloodstream infection, and therefore, say experts, deserves more attention than it is currently being given.

Salmonella is a group of bacteria that can cause different infections. Typhoid and paratyphoid or enteric fever, are caused by Salmonella Typhi and Salmonella Paratyphi. The problem, however, is broader than typhoid. Non-typhoidal Salmonella infections, which often cause gastroenteritis, may go undiagnosed because many people recover without testing. At the same time, antibiotic resistance in many serious infections harder to treat.

Why infections turn serious
Non-typhoidal Salmonella commonly causes gastroenteritis, with diarrhoea, stomach cramps, fever and sometimes vomiting. It is

often linked to poultry, eggs and other animal-based foods. Most healthy people recover with supportive care, but the infection can become serious and spread to the bloodstream. "Salmonella should not be seen as only a cause of diarrhoea," said Swastika Kumar, associate consultant, infectious disease, BGS Hospital, Chennai. "In some patients, especially young children, older adults and those living with other diseases or weakened immunity, it can become invasive and life-threatening."

Dr. Ravi Ranjit D., senior specialist in infectious disease, Apollo Speciality Hospitals, Velur, Chennai, said the actual burden of non-typhoidal Salmonella is difficult to estimate as many mild infections are never diagnosed.

Both typhoid and non-typhoidal Salmonella infections spread through the faecal-oral route, but their sources are different. For typhoid, humans are the reservoir. Non-typhoidal Salmonella has a wider ecology, involving animals, food and the environment. Poultry,

Preventing infections: Typhoid conjugate vaccines, safe water and sanitation, food safety and animal-related interventions all have a role in reducing infections, according to experts.

eggs, meat and other animal derived foods can be sources. Transmission can also occur when raw meat contaminates ready-to-eat food, during preparation.

"Contamination can occur at multiple points, from farms, slaughterhouses and food processing to transportation, storage, restaurants and finally the household kitchen," Dr. Swastika said. "That is why Salmonella is very much a One Health problem

India has surveillance and testing systems, gaps remain, particularly in the large informal food sector.

At the household level, it is important to follow washing hands, using safe water, cooking poultry and eggs thoroughly, refrigerating perishable foods appropriately and keeping raw meat separate from ready-to-eat food.

Challenges and way forward

The major concern is the growing antibiotic resistance in Salmonella. India has seen a major shift in the resistance patterns of S. Typhi. A recent study in *PLoS Neglected Tropical Diseases* said, culture confirmed isolates from 1877 to 2024 found that fluoroquinolone resistance rose sharply, reaching 80% in 2019-20, and remains high.

The emergence and spread of extensively drug resistant typhoid shows what can happen when the resistance accumulates across multiple antibiotic classes. Dr. Swastika said, "It can leave clinicians with very limited treatment options."

Experts say the answer is not to simply use stronger antibiotics. Blood culture is the main test for suspected typhoid and should ideally be done before antibiotics are started. The Widal test has limitations and should not be used alone to diagnose typhoid. For uncomplicated non-typhoidal Salmonella gastroenteritis, treatment usually involves adequate fluids and electrolyte replacement. Antibiotics are usually reserved for severe or invasive infections and people at higher risk of complications.

Prevention remains as important as treatment. The World Health Organization recommends typhoid conjugate vaccines for children from six months of age, however, this is not yet part of India's universal immunisation programme.

The challenge is to treat the infections that genuinely require antibiotics while preventing the infections that can be prevented in the first place.

The changing face of skin lightening practices in India

The language around skin lightening has changed, but the desire for it has remained strong in India, a lot of the advertisement and marketing has now moved online; the country needs strong legislation, campaigns to educate patients, pharmacists and healthcare professionals, and a conversation that shifts the focus to skin health, not colour

Monisha Madhumita

The language of fairness may be changing, but the desire for lighter skin has not necessarily disappeared in our country. As skin-lightening practices move into skincare, dermatological procedures and digital spaces, the health consequences are becoming increasingly harder to recognise and regulate.

Skin lightening in India is changing. The fairness creams that once dominated advertisements are less visible today. The language around them has also shifted. Words such as 'brightening', 'glow', 'do tan' and 'even tone' are now common across skincare products and digital platforms.

For dermatologists, this change is increasingly visible in clinical practice.

Patients may not come to the clinic saying that they have been trying to become fairer. They often present because something has already gone wrong. There may be acne, redness, thinning of the skin, increased facial hair, pigmentation or infections. Oral agents used with the expectation of achieving lighter skin are also being sought.

"We see patients because of the side-effects of what they have tried, and then work backwards," says Kashmi Sarkar, head and director - professor, department of dermatology Vardhman Mahaveer Medical College and Sardaarjung hospital, New Delhi.

The profile is changing too. What was once viewed largely as a concern among women is now also seen among men, teenagers and transgender persons. This makes skin lightening an important skin-health issue, rather than simply a cosmetic concern.

Not all treatment that reduces pigmentation is skin lightening.

Melasma and post-inflammatory hyperpigmentation are common pigmentary disorders. They can be persistent and distressing, particularly in darker skin tones. These conditions may require treatment. The important distinction, Dr. Sarkar says, is between treating a pigmentary disorder and attempting to lighten a person's normal, constitutive skin colour. This distinction is becoming less clear to consumers.

A product described as 'brightening' may be intended to reduce pigmentation, improve dullness or make the skin appear more even. The term itself does not explain what is being changed.

For clinicians, the focus should remain on skin health. Brighter-looking skin can follow better photoprotection, appropriate skincare, control of inflammation and improvements in general health and lifestyle. None of these requires changing a person's natural skin colour.

Digital shift

The larger change is taking place online.

Skin-lightening messages are no longer limited to television advertisements or product packaging. They are increasingly delivered through influencers, e-commerce platforms, before-and-after photographs and social media.

Need for regulation: Skin-lightening messages are no longer limited to television advertisements or product packaging. They are increasingly delivered through influencers, e-commerce platforms, before-and-after photographs and social media. ©RM/istock

Algorithms can amplify these messages. A person who watches one video on pigmentation may subsequently be shown repeated content around brightening products, supplements, peels or procedures. Filters and image manipulation add another layer. Photographs can be altered to make skin appear lighter, smoother or more uniform. Artificial intelligence can make these alterations increasingly difficult to recognise.

Dr. Sarkar believes public education, must therefore, also address digital literacy. People need to learn to recognise filtered or manipulated images and to question the aesthetic standards repeatedly presented to them online.

The impact is particularly relevant for younger users. Repeated exposure can gradually alter what is perceived as normal skin and what is considered a problem requiring correction.

Excessive treatment

The growth of aesthetic skincare has also widened the number of places where people seek treatment.

Patients may move between dermatology clinics, aesthetic centres, salons, spas, social media and online marketplaces. The distinction between medical treatment and cosmetic marketing can become unclear.

Dr. Sarkar stresses that pigmentary disorders should be assessed by qualified dermatologists. Procedures also need to be selected carefully and patients should not be overtreated. This is particularly relevant in darker skin tones, where inflammation caused by aggressive treatment can itself lead to further pigmentation. The treatment can then become part of the problem.

There is also a role for clinicians in managing expectations. Not every variation in skin colour requires treatment. Unregulated over-the-counter

skin-lightening products should be avoided and unrealistic expectations need to be addressed early.

The health consequences can be significant. The International League of Dermatological Societies (ILDS) has warned that the misuse of potent topical corticosteroids in skin-bleaching products can contribute to treatment-resistant fungal infections, irreversible skin damage and systemic side-effects. The organisation has called for stronger regulation, clearer guidance and better public education.

Beyond the clinic

The response to skin lightening therefore also needs to change.

Traditional awareness campaigns remain important, but they may no longer be sufficient when much of the contemporary conversation is taking place online. This is a particular focus of the ILDS Strategic Working Group on Skin Bleaching. The group brings together international dermatology expertise to address harmful skin-lightening practices while also recognising the legitimate need for safe, evidence-based treatment of pigmentary disorders.

The message, says Dr. Sarkar, who is part of the working group, needs to reach people where these practices are now being discussed and promoted. "We need to leverage social media and amplify the message," she says. This includes closer collaboration between the ILDS and national dermatology societies, as well as engagement with pharmacists, educators and credible public voices.

India has previously seen organised campaigns around inappropriate topical steroid use. These efforts included education of both patients and pharmacists. A similar approach is now needed for contemporary skin-lightening practices.

The ILDS initiative also has a wider

aim: to move the conversation away from skin colour as an aesthetic hierarchy and towards skin health. The message is simple, but important. Healthy skin exists in every shade.

For those experimenting with skincare routines, particularly skin lightening, it means understanding the difference between a pigmentary disorder and normal skin colour. It means recognising that medicines used without appropriate supervision can damage the skin. It means knowing that repeated procedures are not always better treatment. Increasingly, it also means understanding that the images seen online may have been filtered, lightened or otherwise altered.

Regulation will need to evolve alongside this change. Looking only for products explicitly labelled as 'fairness' products will miss part of the contemporary market. Claims, ingredients, digital advertising, influencer marketing and access to potent medicines all require attention. But regulation alone cannot address the deeper issue.

Greater awareness has made overt fairness advertising less acceptable. Yet, as Dr. Sarkar points out, social perceptions around skin colour continue to persist. The challenge is therefore no longer only the fairness creams. The people seeking these interventions are also changing. The response now needs to change with them.

For dermatologists, professional societies and public health organisations, the opportunity lies in moving beyond treating complications after they occur. The focus must be on prevention, evidence-based care, digital education and a clearer understanding of what healthy skin actually means.

THE GIST

As skin-lightening practices move into skincare, dermatological procedures and digital spaces, the health consequences are becoming increasingly harder to recognise and regulate.

For clinicians, the focus should remain on skin health. Brighter-looking skin can follow better photoprotection, appropriate skincare, control of inflammation and improvements in general health and lifestyle. None of these requires changing a person's natural skin colour.

There is also a role for clinicians in managing expectations. Not every variation in skin colour requires treatment. Unregulated over-the-counter skin-lightening products should be avoided and unrealistic expectations need to be addressed early.

Topic	English	हिंदी
Core issue	The desire for lighter skin continues, but terminology and marketing have shifted from “ fairness ” to “ brightening ”, “ glow ”, “ de-tan ” and “ even tone .”	गोरी त्वचा की चाह पूरी तरह समाप्त नहीं हुई है, लेकिन मार्केटिंग में “ fairness ” की जगह “ brightening ”, “ glow ”, “ de-tan ” और “ even tone ” जैसे शब्द आ गए हैं।
Changing market	Skin-lightening practices are moving beyond creams to skincare procedures, dermatological treatments and digital marketplaces .	स्किन-लाइटनिंग अब केवल क्रीम तक सीमित नहीं है; यह डर्मेटोलॉजिकल उपचार, कॉस्मेटिक प्रक्रियाओं और डिजिटल मार्केटप्लेस तक फैल गया है।
Medical distinction	Treatment of melasma, post-inflammatory hyperpigmentation and other pigmentary disorders is different from trying to lighten a person's normal skin colour.	मेलास्मा, post-inflammatory hyperpigmentation और अन्य pigmentation disorders का उपचार सामान्य त्वचा के रंग को हल्का करने से अलग है।
Clinical concern	Patients may approach doctors only after inappropriate treatments cause acne, redness, thinning of skin, increased facial hair or infections .	गलत उपचार के बाद मुंहासे, लालिमा, त्वचा पतली होना, चेहरे पर बाल बढ़ना या संक्रमण जैसी समस्याएँ होने पर मरीज डॉक्टर तक पहुँचते हैं।
Digital shift	Advertising has shifted from conventional TV/product packaging to influencers, e-commerce platforms, before-and-after images and social media .	विज्ञापन TV और पैकेजिंग से आगे बढ़कर influencers, e-commerce, before-and-after photographs और social media पर पहुँच गया है।
Algorithmic amplification	Recommendation algorithms may repeatedly expose users to pigmentation/lightening content, reinforcing unrealistic beauty standards.	Recommendation algorithms बार-बार skin-lightening content दिखाकर अवास्तविक सौंदर्य मानकों को मजबूत कर सकते हैं।
Solution	Regulation must combine consumer awareness, digital literacy, professional guidance and responsible advertising .	समाधान में consumer awareness, digital literacy, professional guidance और responsible advertising को साथ लेकर चलना होगा।

AI concern	Edited or AI-enhanced photographs can make skin appear lighter, smoother and more uniform, making manipulation harder to identify.	Edited या AI-enhanced तस्वीरें त्वचा को अधिक गोरा और समान दिखा सकती हैं, जिससे वास्तविक और manipulated image में अंतर करना कठिन होता है।
Young people	Repeated exposure may gradually alter young people's perception of what constitutes “normal” skin.	लगातार exposure युवाओं की normal skin के प्रति धारणा को प्रभावित कर सकता है।
Unsafe products	Unregulated products can expose people to inappropriate ingredients, including potent topical corticosteroids, causing serious side-effects.	अनियंत्रित उत्पादों में अनुचित तत्व, विशेषकर शक्तिशाली topical corticosteroids, गंभीर दुष्प्रभाव पैदा कर सकते हैं।
Regulatory challenge	Online advertising, influencer marketing and e-commerce make conventional regulation more difficult.	Online advertising, influencer marketing और e-commerce ने पारंपरिक regulation को अधिक कठिन बना दिया है।

- **Key concepts to remember**

- **Colourism** means discrimination or preferential treatment based on skin tone, generally favouring lighter skin. It is different from racism, although the two can overlap.

- **Hyperpigmentation** is excessive pigmentation in particular areas of the skin. Treating a medical pigmentation disorder should not automatically be equated with cosmetic skin lightening.

- **Digital literacy** is increasingly becoming a **public-health tool** because people need the ability to identify manipulated images, misleading advertisements and questionable medical claims online.

- **Old model:**

Fairness cream → TV advertisement → explicit promise of fairer skin

- **Emerging model:**

“Glow / brightening / de-tan” → influencer → algorithm → edited/AI image → e-commerce product/procedure

- Therefore:

- **Social bias → Digital amplification → Consumer demand → Unregulated treatment → Health consequences**

Challenge	Exam-oriented interpretation
Deep-rooted preference for lighter skin	Social attitudes cannot be changed by regulation alone
Euphemistic marketing	“Fairness” claims can reappear through words such as glow/brightening
Influencer ecosystem	Advertisement and personal recommendation can become blurred
AI/manipulated photographs	Creates unrealistic expectations
E-commerce	Questionable products can reach consumers easily
Excessive cosmetic treatment	Medical treatment and commercial cosmetic intervention can overlap
Weak consumer awareness	Consumers may not recognise harmful ingredients or misleading claims
Algorithmic reinforcement	Platforms can repeatedly expose vulnerable users to similar content

- Consider the following statements regarding skin-lightening practices:
 - Treatment of hyperpigmentation and cosmetic lightening of normal skin colour are medically identical objectives.
 - Algorithm-driven digital platforms can potentially reinforce particular beauty standards through repeated exposure.
 - Digital literacy can have relevance to public health in the context of misleading skincare information.
- Which of the statements given above is/are correct?
 - **A. 1 only**
 - B. 2 and 3 only**
 - C. 1 and 3 only**
 - D. 1, 2 and 3**

Danger from above

Natural outbursts in hills remain a rising amid climate change

Danger struck Nepal on Wednesday after a flash flood ravaged the Himalayas and foothills. As of Thursday, at least 359 people including several foreign tourists, had died, while at least 300 Indians remained missing. Satellite imagery analysed by global agencies, including the Indian Space Research Organisation, points to a glacier collapse or a rock avalanche in Tibet, possibly followed by a temporary river blockage and its sudden failure. An earthquake was initially suggested, but evidence has not borne it out. While the immediate flood wave has passed, there are warnings of possible secondary flooding from debris blockages upstream. There has been extensive damage along the Bhoti Koshi and Trishuli corridors, with settlements washed away and hydropower and monitoring infrastructure damaged. Nepalese authorities said 38 motorable and 45 suspension bridges and about 40 kilometres of roads had been damaged.

Given that it is the monsoon, North India and the larger Himalayan regions are under the influence of a powerful Western Disturbance. It would thus not be unreasonable to attribute the floods to these extratropical storms that can cause clouds to condense with moisture and release enormous quantities of rain. But the absence of satellites is helping establish a more complex picture, pointing to collapsing glaciers and receding the October 2019 South Lhonak Lake disaster in Sikkim. There, an anonymous Himalayan landslide gave way, releasing millions of tonnes of water, debris and rock that pulverised 58-km's largest hydropower project, submerging 7,000 hectares and the resulting Glacial Lake Outburst Flood (GLOF) had been years in the making. The Indian Himalayas have nearly 7,000 glaciers, with about 35,000 glaciers, some monitored through remote sensing. Yet, fully accessible only through treacherous site visits, difficult because these lakes lie in inhospitable terrain while expeditions are generally feasible only from July to September. Even with satellite monitoring, accurately forecasting a glacier collapse remains exceedingly difficult and can be counterproductive if warnings trigger panic among residents who, often because of fear or lack of alternatives, are unable to move out of harm's way. Dams and hydropower projects in such terrain are often among the first casualties of these natural outbursts, which are in creating amid global warming. Beyond relief and rescue, governments need to strengthen building codes, discourage settlements and large projects in known vulnerable zones, and invest in better tracking of glacier behaviour. India has been a long-term disaster planning into development programmes. A tragedy is frequently not the result of a conspiracy but the product of passive neglect; the latter can be addressed.

New-age fires

Fire accidents in ICUs need better and more evacuation facilities

Not too long ago, India's fire accidents typically occurred in industrial facilities, large offices, multi-storeyed, fire-ravaged units and railway compartments, caused by faulty machinery, weak safety procedures and careless use of flammable materials. While these risks persist, what has got added to the country's poor record in fire safety in the last 10 years or so is residential buildings, hotels and hospitals, especially intensive care units (ICUs). Electrical fires now seem predominant, often caused by increased appliance use, overloaded electrical systems and poor maintenance. ICUs are especially vulnerable with their oxygen-rich environment. This month, back-to-back accidents at neonatal ICUs in Anand, Maharashtra, and a paediatric ICU in Madhya Pradesh, claimed the most vulnerable newborn babies. The Anand fire was put out in 30 minutes, but the stroke was too much for the three babies admitted because of complications. A faulty ventilator in the Madhya Pradesh case lit the NICU at Chhindwara District Hospital, a short circuit in a warmer triggered a fire and three babies, just days old, suffered burns. Over the last 15 years, ICU fires, including the one in Bhubai in 2024, in which newborns died, were not served as a wake-up call. The Anand fire shed more features with previous incidents.

Perhaps the best way to prevent such new-age fire would be to treat ICU accidents as a distinct category. ICUs are sealed compartments where smoke fills up very quickly. In an NICU, where patients cannot self-evacuate, evacuation drills are essential. A hospital should have at least three independent exits, with at least two allowing horizontal evacuation, automatic sprinklers, independent power lines for life support, oxygen cylinder bed supports, and fire drills every two years. A well-designed ICU also locates oxygen outlets away from rockets. Following a Delhi NICU fire, the National Neonatology Forum called for mandatory fire safety certification for NICU-equipped hospitals, regular power audits, analogue addressable alarms, and an evacuation protocol - new RACE or Rescue, Alarm, Confine, Extinguish/Evacuate. The 2020 National Guidelines on Fire and Life Safety in Healthcare Facilities can be a useful starting point for ICU NICU safety. Beyond all this lies an issue in power quality: electrical harmonics. NICUs' equipment is filled with electronic components that draw distorted current, which can abnormally overload neutral wiring, transformers, and loose connections without tripping a breaker. Post-fire reports citing generic "electrical faults" or "technical issues" may well be missing this harmonic-driven degradation, a largely unaddressed risk factor.

Days after both House of Parliament were adjourned *over the* on August 13, 2020, the monsoon session has yet to be formally prorogued. The delay has prompted speculation that Parliament could be reconvened for another attempt at the constitutional amendment linked to delimitation and women's reservation. Whether or not that happens, it gives urgency to a question: Parliament must confront a most delimitation necessarily mean an enlargement of the Lok Sabha?

Numbers alone cannot decide
At first glance, the issue looks like arithmetic. India's population has grown enormously since Lok Sabha seats were frozen half a century ago, so it seems natural to argue that representation must now expand correspondingly. But, constitutional design is not arithmetic alone.

Article 81 requires representation broadly to correspond to population, "so far as practicable", while Article 52 provides for readjustment after every Census. Yet, Parliament has twice modified the mechanical application of this principle when another compelling national objective was at stake. In 1976, through the 42nd Constitutional Amendment, the first State allocation of seats was frozen on the basis of the 1971 Census so that States successful in family planning were not politically penalised for reducing population growth. The freeze was later extended by the 84th Amendment until the publication of figures from the first Census conducted after 2026. Parliament thus recognised that population matters, but it is not the only constitutional value at stake.

The government has reportedly suggested increasing every State's representation by roughly 80%, arguing that this would leave each with the same "proportion" of Lok Sabha seats that it has today. On the face of it, that appears to answer the fear of the authors State of losing their relative position. But, proportionality falls only half the story.

Suppose Uttar Pradesh rises from 80 seats to 120, while Tamil Nadu rises from 39 to about 59. Their proportional relationship remains unchanged. Yet, the absolute gain in voting strength rises from 41 Members of Parliament (MP) in around 10. Parliament does not vote in proportion; it votes in absolute numbers. Governments are formed by numbers, and numbers are not absolute. Constitutional amendments are decided by numbers. A 50% pro-rata increase may preserve the ratio while widening the numerical gap.

The 1976 freeze therefore embodied a federal compromise. States that succeeded in population stabilisation would not see their political voice diminished for doing what national policy encouraged. That understanding should not now be thoughtlessly discarded.

There is also a fallacy of proportionality. Seats and enlargement are inseparable. They are not. India has already shown that constituency boundaries can be redrawn without changing the

N.Y. Quirushi
Former Chief Election Commissioner of India and author of An Unconquered Nation: The Making of the Great Indian Election

Bigger House, weaker deliberation
There is another serious concern: what a larger House does to Parliament's own functioning. Parliamentary time does not expand with the number of MPs. Even with 543 members, many MPs hardly get opportunities to speak, let alone to raise matters of public importance. A Lok Sabha enlarged by 80%, to more than 800 members, would reduce those opportunities further. It may increase representation numerically while weakening the quality of deliberation, one of Parliament's most important functions. Indian MPs already represent the largest average constituencies among the world's major democracies - several times the size of a U.S. congressional district or a U.K. constituency. Preserving the House at 543 while the population keeps growing means that members only increase after delimitation, and the case for more representation to increase its visibility is a real one. But it does not follow that the additional representative must sit in Parliament. Most citizens approach elected representatives over roads, schools, hospitals, local services and State administration - matters substantially within the State sphere. If population growth has made constituencies unworkable, strengthening representation at State level is, therefore, a more sensible solution. More MPAs and smaller Assembly constituencies can bring representatives closer to citizens without continuously enlarging the national legislature.

That expansion poses a second, and more serious, federal arithmetic constraint that makes Lok Sabha expansion fraught. A larger Assembly shifts the balance between States - each now closer to its own population. Vidhan Sabhas can therefore grow to meet accordingly needs without disturbing the inter-State balance in Parliament that the 1976 freeze was designed to protect. Yet, comes women's reservation.

Delimitation, federal fairness and women's representation can all be achieved without enlarging the Lok Sabha

number of seats allocated to each State. The delimitation after the 2001 Census reorganised constituencies within States while maintaining the existing inter-State balance.

That principle can be adopted again. The 2027 Census can provide the basis for redrawing constituencies within each State so that populations are more evenly distributed. Boundaries can reflect demographic movement and redistribution. None of this requires increasing the Lok Sabha beyond 543 or diluting the present federal balance.

A continuously expanding legislature is also not an inevitable consequence of population growth. The United States House of Representatives has remained at 435 voting members since 1789, with only minor exceptions for more than a century despite enormous population growth. Switzerland's National Council has remained at 200 members since 1963. Going a step further, Hungary reduced its Parliament from 386 members to 199, while Italy reduced its Chamber of Deputies from 630 to 400. There is no democratic law requiring legislatures to grow whenever population grows.

Preserve 543, undertake reforms
The solution is simple: retain the Lok Sabha at 543, preserve the present inter-State distribution of seats, undertake delimitation within States on updated population figures, implement women's reservation within that structure, and expand the Vidhan Sabhas to absorb the additional pressure that population growth has created. Not just a century, States have pursued demographic policies knowing that successful population stabilisation would not reduce their Parliamentary influence. Southern States in particular invested heavily in education, health care and family welfare and achieved fertility levels that national policy itself encouraged. To reward that success with a larger political advantage for States where population grew faster would invert the incentive the Union deliberately created.

The question, therefore, is not whether population should matter. Of course it should. The question is whether it is not only mechanically rearrange the federal political balance that India continuously preserved for five decades. Twice before, Parliament amended the constitutional framework to preserve the existing inter-State allocation despite population changes. There is no reason it cannot do so a third time. The uncertainty over whether Parliament may be represented by more than 800 members is a debate. Decisions taken now could shape the federal balance of the Republic for decades.

Delimitation is necessary. Women's representation is overdue. Updated constituency boundaries are desirable. India's constitutional objectives require an 800-plus-member Lok Sabha.

Sometimes constitutional wisdom lies not in making institutions larger, but in preserving the balance that has allowed them endure. 543 has served India for more than half a century. There is a strong constitutional, federal and democratic case for letting this number remain 543.

But women's representation should not become a constitutional justification for enlarging the House. One-third of the present Lok Sabha is approximately 161 seats. Women can receive their constitutionally promised representation within the existing House of 543. The purpose of fixing the reservation is to alter the gender composition of the House, not necessarily to create hundreds of additional seats.

A 80% expansion could produce a curious result: the number of women MPs would rise, but it would be desirable, but so would the numerical dominance of the already larger males. A reform intended to correct one representational imbalance could deepen another. Women's representation and federal fairness are both legitimate constitutional objectives. India need not choose between them.

Preserve 543, undertake reforms
The solution is simple: retain the Lok Sabha at 543, preserve the present inter-State distribution of seats, undertake delimitation within States on updated population figures, implement women's reservation within that structure, and expand the Vidhan Sabhas to absorb the additional pressure that population growth has created.

Not just a century, States have pursued demographic policies knowing that successful population stabilisation would not reduce their Parliamentary influence. Southern States in particular invested heavily in education, health care and family welfare and achieved fertility levels that national policy itself encouraged. To reward that success with a larger political advantage for States where population grew faster would invert the incentive the Union deliberately created.

The question, therefore, is not whether population should matter. Of course it should.

The question is whether it is not only mechanically rearrange the federal political balance that India continuously preserved for five decades. Twice before, Parliament amended the constitutional framework to preserve the existing inter-State allocation despite population changes. There is no reason it cannot do so a third time. The uncertainty over whether Parliament may be represented by more than 800 members is a debate. Decisions taken now could shape the federal balance of the Republic for decades.

Delimitation is necessary. Women's representation is overdue. Updated constituency boundaries are desirable. India's constitutional objectives require an 800-plus-member Lok Sabha.

Sometimes constitutional wisdom lies not in making institutions larger, but in preserving the balance that has allowed them endure. 543 has served India for more than half a century. There is a strong constitutional, federal and democratic case for letting this number remain 543.

India's return to its Central Asian neighbourhood

Primo Minister Narendra Modi is set to travel to Central Asia in the next few days. The first part of that being a state visit to Uzbekistan, followed by participation in the meeting of Heads of State of the Shanghai Cooperation Organisation (SCO) in the Kyrgyz capital, Bishkek, called Prunus in Soviet times. The change of names is not just symbolic.

It represents the birth of a new region. Central Asia is an evocative marker. The region lies landlocked, situated between two giants, Russia and China. In most of its countries, the post 1991 generation has largely taken over, engaged in finding a new identity. Afghanistan is the main religion, but does not define identity and is therefore not a political project. The fight against ethnic minorities and terrorism is unaccompanied. Occasional catastrophes such as the devastating Gorkha Earthquake in Nepal in 2015, China's constant fear of spread of radicalisation in the border regions and export of instability and extremism to the region. Afghanistan are everyday reminders of the challenges.

In Central Asia, there are a multitude of ethnicities, languages, geographies and resources endowments. These nations share a new foreign policy choices, with Turkmenistan practicing rigorous neutrality. Relations among countries are complicated by legacy disputes over borders, water resources and overlapping jurisdiction. Turkey and Iran dominate the region, while the United States and the European Union are working their way in as Russia's loyal speakers and China's allies.

Mr. Modi's 2019 visit to all five Central Asian countries was historic. It marked the end of an untested Indian policy of deferring to Russia in its periphery - politely keeping away. In 2017, India was not a member of the SCO as a full member by Russia, as Pakistan was, by China. To mark the 30 years of their independence/diplomatic ties, India

made an unprecedented gesture of inviting all Central Asian leaders as chief guests for the Republic Day in 2022. The COVID-19 pandemic forced the event to be held only virtually, but without it leading to the creation of high-level mechanisms for cooperation, including the India-Central Asia Dialogue.

Beyond geography
If South Asia and West Asia, not to speak of East Asia and the Indian Ocean Region, are India's neighbourhoods, Central Asia is no less. A lack of overland connectivity does not take away from the civilisational link India has with the region - in culture, religion, language and architecture. Geographically, India and Tajikistan are separated by only 100 km. The narrow Wakhan corridor that lies in Afghanistan, India is part of the continuous Great Silk Road network.

Pakistan, a historically new piece in the equation, seeks to usurp the historical legacy of instability and extremism that India has shed off, physically and otherwise, from these Central Asian countries. It is a geopolitical challenge, but it is, as an anecdotal evidence shows, doomed to failure. Yet, India must not allow this to succeed. Countries of the region are looking beyond Russia and China for partners in their socio-economic development. India's broad experience as a plural, moderate and democratic society is admired not feared in the region.

It is a great day, connectivity, and opportunity to go back to the region must be welcomed. India should build upon the foundations on which its relations with the region, whether in the economic, trade, defence, natural resources, technology spheres or in softer areas such as cultural, educational, health and tourism exchanges. The choice of a state visit to Uzbekistan is consistent with the steady improvement of relations under President Mirziyoyev since 2016. It is among the most

dynamic countries of the region, and most forward in the diversification of its foreign policy. For India, closer ties to Tashkent, Samarkand or Bishkek will vouch for the empathy and resonance between the two peoples.

There are also broader reasons - Uzbekistan has been uncompromising in its fight against terrorism and extremism. Its intimate knowledge of Afghanistan, and pragmatic approach towards the Taliban, are of key importance to India. India has had detailed discussions with it on alternative rail and road connectivity routes through Iran and Afghanistan which need to be restored in the light of recent developments in these countries.

India and the SCO
Starting from the small beginnings of the "Shanghai Five" in 1996, the SCO, in its 26th anniversary, has grown to 10 members, 15 dialogue partners and two observers. With the exception of 2020, Mr. Modi has been a regular participant in SCO Heads of State meetings. India's SCO engagement is driven by geography, not ideology. Within the SCO chambers, negotiating against a China-Pakistan dyad is demanding but essential. India has shown its head above the swamp by suggesting several ideas to enhance cooperation in the economic, technological and civilisational fields. In Tashkent last year, Mr. Modi put forward the vision of a "new Silk Road" for connectivity, and opportunity to go back to the region must be welcomed. India should build upon the foundations on which its relations with the region, whether in the economic, trade, defence, natural resources, technology spheres or in softer areas such as cultural, educational, health and tourism exchanges. The choice of a state visit to Uzbekistan is consistent with the steady improvement of relations under President Mirziyoyev since 2016. It is among the most

The Prime Minister's visit is an opportunity for India to deepen its ties with the region, expand its economic, trade and strengthen its diplomatic influence

Why 543 should remain 543

Days after both Houses of Parliament were adjourned *sine die* on August 13, 2026, the monsoon session has yet to be formally prorogued. The delay has prompted speculation that Parliament could be reconvened for another attempt at the constitutional amendment linked to delimitation and women's reservation. Whether or not that happens, it gives urgency to a question Parliament must confront: must delimitation necessarily mean an enlargement of the Lok Sabha?

Numbers alone cannot decide

At first glance, the issue looks like arithmetic. India's population has grown enormously since Lok Sabha seats were frozen half a century ago, so it seems natural to argue that representation must now expand correspondingly. But, constitutional design is not arithmetic alone.

Article 81 requires representation broadly to correspond to population, "so far as practicable", while Article 82 provides for readjustment after every Census. Yet, Parliament has twice modified the mechanical application of this principle when another compelling national objective was at stake. In 1976, through the 42nd Constitutional Amendment, the inter-State allocation of seats was frozen on the basis of the 1971 Census so that States successful in family planning were not politically penalised for reducing population growth. The freeze was later extended by the 84th Amendment until the publication of figures from the first Census conducted after 2026. Parliament thus recognised that population matters, but it is not the only constitutional value at stake.

The government has reportedly suggested increasing every State's representation by roughly 50%, arguing that this would leave each with the same 'proportion' of Lok Sabha seats that it has today. On the face of it, that appears to answer the fear of the southern States of losing their relative position. But 'proportion' tells only half the story.

Suppose Uttar Pradesh rises from 80 seats to 120, while Tamil Nadu rises from 39 to about 59. Their proportional relationship remains unchanged. Yet, the absolute gap in voting strength rises from 41 Members of Parliament (MP) to around 61. Parliament does not vote in proportions; it votes in absolute numbers. Governments are formed by numbers, and confidence motions, legislation, and constitutional amendments are decided by numbers. A 50% pro-rata increase may preserve the ratio while widening the numerical gap.

The 1976 freeze therefore embodied a federal compact: States that succeeded in population stabilisation would not see their political voice diminished for doing what national policy encouraged. That understanding should not now be thoughtlessly discarded.

There is also a misconception that delimitation and enlargement are inseparable. They are not. India has already shown that constituency boundaries can be redrawn without changing the

S.Y. Quraishi

Former Chief Election Commissioner of India and the author of 'An Undocumented Wonder - The Making of the Great Indian Election'

number of seats allocated to each State. The delimitation after the 2001 Census reorganised constituencies within States while maintaining the existing inter-State allocation.

That principle can be adopted again. The 2027 Census can provide the basis for redrawing constituencies within each State so that populations are more evenly distributed. Boundaries can reflect demographic movement and urbanisation. None of this requires increasing the Lok Sabha beyond 543 or disturbing the present federal balance.

A continuously expanding legislature is also not an inevitable consequence of population growth. The United States House of Representatives has remained at 435 voting members (there were some temporary exceptions) for more than a century despite enormous population growth. Switzerland's National Council has remained at 200 members since 1963. Going a step further, Hungary reduced its Parliament from 386 members to 199, while Italy reduced its Chamber of Deputies from 630 to 400. There is no democratic law requiring legislatures to grow whenever population grows.

Bigger House, weaker deliberation

There is another serious concern: what a larger House does to Parliament's own functioning. Parliamentary time does not expand with the number of MPs. Even with 543 members, many MPs hardly get opportunities to speak, ask questions or raise matters of public importance. A Lok Sabha enlarged by 50%, to more than 800 members, would reduce those opportunities further. It may increase representation numerically while weakening the quality of deliberation, one of Parliament's most important functions. Indian MPs already represent the largest average constituencies among the world's major democracies – several times the size of a U.S. congressional district or a U.K. constituency. Freezing the House at 543 while the population keeps growing means that burden only increases after delimitation, and the case for more representatives to improve accessibility is a real one. But it does not follow that the additional representatives must sit in Parliament. Most citizens approach elected representatives over roads, schools, hospitals, local services and State administration – matters substantially within the State sphere. If population growth has made constituencies unwieldy, strengthening representation at the State level is, therefore, a more sensible solution. More MLAs and smaller Assembly constituencies can bring representatives closer to citizens without continuously enlarging the national legislature.

That expansion faces none of the federal-arithmetic constraint that makes Lok Sabha expansion fraught. A larger Assembly shifts no balance between States – each answers only to its own population. Vidhan Sabhas can therefore grow to meet accessibility needs without disturbing the inter-State balance in Parliament that the 1976 freeze was designed to protect. Then comes women's reservation.

One-third reservation for women is now being connected with delimitation, and enlargement of the Lok Sabha is presented partly as a way of accommodating women without disturbing existing political interests.

But women's representation should not become a constitutional justification for enlarging the House. One-third of the present Lok Sabha is approximately 181 seats. Women can receive their constitutionally promised representation within the existing House of 543. The purpose of reservation is to alter who occupies parliamentary seats, not necessarily to create hundreds of additional ones.

A 50% expansion could produce a curious result: the number of women MPs would rise, which is desirable, but so would the numerical dominance of the already larger States. A reform intended to correct one representational imbalance could deepen another. Women's representation and federal fairness are both legitimate constitutional objectives. India need not choose between them.

Preserve 543, undertake reforms

The solution is simple: retain the Lok Sabha at 543; preserve the present inter-State distribution of seats; undertake delimitation within States on updated population figures; implement women's reservation within that structure; and expand the Vidhan Sabhas to absorb the accessibility pressure that population growth has created.

For half a century, States have pursued demographic policies knowing that successful population stabilisation would not reduce their parliamentary influence. Southern States in particular invested heavily in education, health care and family welfare and achieved fertility levels that national policy itself encouraged. To reward that success with a larger political advantage for States where population grew faster would invert the incentive the Union deliberately created.

The question, therefore, is not whether population should matter. Of course it should. The question is whether it should now mechanically rearrange the federal political balance that India consciously preserved for five decades. Twice before, Parliament amended the constitutional framework to preserve the existing inter-State allocation despite population changes. There is no reason it cannot do so a third time. The uncertainty over whether Parliament may be recalled makes this more than an academic debate. Decisions taken now could shape the federal balance of the Republic for decades.

Delimitation is necessary. Women's representation is overdue. Updated constituency boundaries are desirable. But none of these objectives requires an 800-plus-member Lok Sabha.

Sometimes constitutional wisdom lies not in making institutions larger, but in preserving the balance that has allowed them to endure; 543 has served India for more than half a century. There is a strong constitutional, federal and democratic case for letting this number remain 543.

Delimitation, federal fairness and women's representation can all be achieved without enlarging the Lok Sabha

Issue	English	हिंदी
Present Lok Sabha strength	Lok Sabha currently has 543 elected seats .	लोकसभा में वर्तमान में 543 निर्वाचित सीटें हैं।
Core debate	Should population growth automatically result in more Lok Sabha seats? The author argues No .	क्या जनसंख्या बढ़ने पर लोकसभा सीटें भी स्वतः बढ़नी चाहिए? लेखक का उत्तर नहीं है।
Article 81	Provides that representation should broadly correspond to population, “so far as practicable.”	अनुच्छेद 81 के अनुसार प्रतिनिधित्व यथासंभव जनसंख्या के अनुरूप होना चाहिए।
Article 82	Provides for readjustment/delimitation after every Census , subject to constitutional provisions.	अनुच्छेद 82 प्रत्येक जनगणना के बाद सीटों के पुनर्समायोजन/परिसीमन का आधार देता है।
42nd Amendment, 1976	Froze inter-State allocation of Lok Sabha seats based broadly on the 1971 Census , protecting States that successfully controlled population growth.	42वें संविधान संशोधन, 1976 ने राज्यों के बीच लोकसभा सीटों के आवंटन को 1971 की जनगणना के आधार पर फ्रीज किया।
Alternative solution	Strengthen Vidhan Sabhas, local institutions and accessibility of representatives rather than continuously enlarging Parliament.	संसद को लगातार बड़ा करने के बजाय विधानसभाओं, स्थानीय संस्थाओं और प्रतिनिधियों की accessibility को मजबूत किया जा सकता है।

84th Amendment	Extended the freeze on inter-State seat allocation until the first Census taken after 2026 .	84वें संविधान संशोधन ने इस व्यवस्था को 2026 के बाद होने वाली पहली जनगणना तक बढ़ाया।
Federal concern	A purely population-based redistribution could increase the political weight of faster-growing States and relatively reduce that of States that achieved population stabilisation.	केवल जनसंख्या आधारित पुनर्वितरण से अधिक जनसंख्या वृद्धि वाले राज्यों का राजनीतिक प्रभाव बढ़ सकता है और जनसंख्या नियंत्रण में सफल राज्यों का सापेक्ष प्रभाव घट सकता है।
Delimitation ≠ Expansion	Constituency boundaries can be redrawn without necessarily increasing the total number of Lok Sabha seats.	निर्वाचन क्षेत्रों की सीमाएँ बदली जा सकती हैं, बिना लोकसभा की कुल सीटें बढ़ाए।
2027 Census	The author says updated Census data can provide the basis for redrawing constituencies within States.	लेखक के अनुसार 2027 की जनगणना के आँकड़े राज्यों के भीतर निर्वाचन क्षेत्रों के पुनर्निर्धारण का आधार बन सकते हैं।
Women's reservation	Women can receive their constitutionally provided representation within the existing House , according to the author.	लेखक के अनुसार महिलाओं का आरक्षण मौजूदा सदन की संरचना के भीतर लागू किया जा सकता है।

Bigger House: Author's Concerns

India's MPs already represent exceptionally large constituencies. At first glance, increasing MPs therefore appears attractive.

However, the author raises another issue:

543 MPs → already limited speaking time → Larger House → less time per MP → potentially weaker deliberation

The article gives international comparisons:

Legislature	Size/Observation mentioned 
US House of Representatives	435 voting members
Swiss National Council	200
Hungarian Parliament	Reduced from 386 to 199
Italian Chamber of Deputies	Reduced from 630 to 400
India Lok Sabha	543 elected members

The broader lesson is:

Population growth ≠ democratic necessity to continuously expand legislature size.

- Under the **Constitution (106th Amendment) Act, 2023 — Nari Shakti Vandan Adhiniyam**, roughly **one-third reservation** is provided for women in the Lok Sabha and State Legislative Assemblies, with implementation linked to a delimitation exercise after the relevant Census process.
- The author argues that:
 - **Women's representation should increase by changing WHO occupies parliamentary seats, rather than necessarily increasing HOW MANY parliamentary seats exist.**
 - So:
 - **543 seats $\times$ 1/3 $\approx$ 181 seats for women**
 - This is conceptually important: **reservation and expansion are separate constitutional-policy questions.**

North–South / Federalism Dimension

This is probably the **most important mains angle**.

Southern States such as Tamil Nadu and Kerala achieved relatively earlier demographic transition through improvements in areas such as:

Education → Healthcare → Family planning → Lower fertility → Slower population growth

If future representation were based mechanically on population, faster-growing States could receive substantially greater parliamentary weight.

This creates a policy paradox:

Successful population control → slower population growth → relatively fewer seats → reduced political influence

Therefore, delimitation becomes not merely an electoral issue but a question of:

Federalism + Demography + Representation + Regional balance + Cooperative federalism

Author's Proposed Way Forward

The article essentially advocates:

Retain 543 Lok Sabha seats

Conduct delimitation using updated population data

Preserve inter-State balance

Redraw constituencies within States

Implement women's reservation within existing structure

Strengthen State Assemblies/local institutions where greater representation is needed

The objective is to reconcile three competing values:

Democratic representation + Federal fairness + Women's representation

- Consider the following statements:
 - Article 81 of the Constitution deals with the composition of the Lok Sabha.
 - Article 82 provides for readjustment following every Census in accordance with law.
 - Delimitation necessarily requires an increase in the total number of Lok Sabha seats.
 - The freeze on inter-State allocation of Lok Sabha seats was originally introduced in the constitutional framework during the 1970s.
- Which of the statements given above are correct?
 - **A. 1 and 2 only**
 - B. 1, 2 and 4 only**
 - C. 2, 3 and 4 only**
 - D. 1, 2, 3 and 4**

IN BRIEF

LIC subscribes to Bajaj Finance's ₹5,000 cr. NCDs

LIC has subscribed to Bajaj Finance's ₹5,000 crore non-convertible debentures (NCDs). The interest said it has subscribed to the issue of face value of ₹1 lakh each, of the deposit taking non-banking financial company, totalling ₹5,000 crore. LIC said it is a long-term investment. The coupon rate of 8.15% per annum and a tenure of 3,653 days. The first coupon payment will be on August 27, 2027 and annually thereafter. The maturity date of the NCDs is August 27, 2036.

KPR Mill to invest ₹1,225 cr. in greenfield projects, expansion

Coimbatore-based KPR Mill, which has integrated textile production capacities, is investing ₹1,225 crore in greenfield projects and expanding existing capacities. The company said it expects ₹2,000 crore additional revenue from the new facilities when they are commissioned and the entire capex will be met through internal accruals. KPR will also set up a new apparel manufacturing factory in Coimbatore at ₹75 crore to make 2.5 million garments.

HCL sets up GPC in Pune for German partner Wacker

HCLTech on Thursday announced that its partner Wacker Chemie AG, a German chemicals and biotechnology company, had established a Global Capability Center in Pune. The GPC, set up and operated by HCL, will support Wacker's engineering, IT and manufacturing initiatives, it said. The initiative marks an important milestone in Wacker's digital transformation, said Dr. Frank Peltzer, Executive V-P and Country Head - Germany, HCLTech.

Zee's Chandra to pay ₹6.5 cr. under IBC vs. ₹22,000 cr. due

Lakshmi Mishra
MUMBAI

Top banks may face a 90% haircut via the National Company Law Tribunal (NCLT) ordering Zee Media Group founder Subhash Chandra to pay ₹6.5 crore against ₹22,000.57 crore due to creditors in personal insolvency proceedings.

The NCLT went by the decision of its creditors who okayed Mr. Chandra's offer. The matter involved India's leading Finance and personal guarantor Mr. Chandra.

The tribunal went by the decision of a majority of Committee of Creditors (CoC) who chose the offer.

Allegedly they were related party and associated with Mr. Chandra and a large segment of creditors claim from Haryana where claims were admitted by the Resolution Professional at without examining the manner in which the alleged debts had arisen.

The Repayment Plan submitted by the Personal Guarantor is required to be approved subject to exclusion of the claims submitted through Ash Kumar on behalf of 960 individuals and 300 individuals from the final list of creditors and consequential redistribution of the repayment amount among the remaining eligible creditors.

The approved Repayment Plan will be binding on all the creditors. It said. In this case, the more than 90% creditors willingly approved Mr. Chandra's proposal save their credentials. It was signed by other creditors.

The creditors who opposed the repayment plan included Asia Bank, RBL,

A.P. to become third subsea hub on data centre buildout

The State is witnessing investments from tech giants Microsoft and Google, which are building fresh subsea cable infrastructure, currently concentrated in Mumbai and Chennai

Arun Desai
NEW DELHI

As a result of data-centre buildout in Andhra Pradesh and Telangana, the former's coastline soon hold new landing stations for subsea cables, which connect global internet with India.

On one hand, Microsoft is participating in a consortium with firms like Lightstorm and Singaporean telco Singtel to build the 3,000 km India-Thailand Asia (ITSEA) subsea cable system, which will link Vindhya, where the tech giant's datacentre complex is being built.

"As part of this AI hub... we're bringing in multiple new subsea cables that will land on the coast of Andhra Pradesh around the Visakhapatnam area," Alexander Smith, a Google executive who oversees several of the firm's infrastructure projects in the Asia Pacific region, told *The Hindu* in an interview Thursday.

"That will mean that essentially India will have, after Mumbai and Chennai, a third digital international subsea gateway... connect Andhra Pradesh, southern Andhra Pradesh, to Singapore and a couple of other main markets, down into Australia and right around into the Middle East and Europe and

Network busy

A 7% increase in new landing stations for subsea cables, which connect global internet with India

A 7% increase in new landing stations for subsea cables, which connect global internet with India

beyond. So this will... make India and Vizag in particular one of the most connected places in the world," Mr. Smith added. Lightstorm, an Israeli firm, Gupta said in an interview with *The Hindu* in June that ITSEA "connects South East Asia, specifically Singapore and Malaysia, to the east coast of India," and that the cable system, which also connects to Chennai, "provides a brand new corridor to South Asia" from South East Asia, where a lot of infrastructure serving Indian enterprises and consumers continues to evolve.

The cable system is set to be ready for service in Q4 2020. Mr. Gupta said that new cable buildouts to a fresh location was key to preserving Indian internet connectivity from a strategic standpoint.

"If you peel back the onion and look at the cables which really connect the east coast of India... most of these are pretty old cables that were installed easily about 8, 10, 12, 15

years old... [they] are filled with capacity and are also rapidly running into end of life," Mr. Gupta said that there were geopolitical de-risking factors driving these investments. "I don't need to tell you what's happening in West Asia, which means people are beginning to think, hey, not this is getting so dangerous, why can't we think the trade route that at least I have an alternate path in case connectivity is lost."

On top of the subsea cable landing, both projects require significant infrastructure further inland. "This is a pan-India project," Mr. Smith said.

"We're needing to in-situ and then light and aggregate thousands of kilometres of new fibre... I think what's really appreciated is that this will really connect a new layer of digital connectivity... that will go between the state levels as well as the union level."

Google said the firm was trying to require as much renewable power as possible for its data centres. The Google facility will focus on inference for domestic enterprises and government agencies, as there has been nearly 1,500 km of construction. Upon completion of the ongoing project, the network will expand to almost 20,000 km," the CMD said.

SEBI to propose SOP for unscheduled holidays

Ashokamithran T.
MUMBAI

The Securities and Exchange Board of India (SEBI) is set to propose a standard operating procedure (SOP) for operational activities related to unscheduled market holidays, as part of efforts to strengthen market resilience while improving efficiency and ease of doing business.

"Our endeavour has been to build resilience and strengthen the risk management systems. At the same time, we want to facilitate greater efficiency and ease of doing business," SEBI Chairman Tulsin Kanta Pandey said at an event marking the 30th anniversary of NSE Clearing Ltd. on Thursday.

Addressing questions on potential changes to the newly introduced Closing Auction Session (CAS), he said currently there were no plans to modify the system and expressed confidence that participation would increase over time.

GAIL to stretch natural gas pipeline network up to 20,000 km: CMD

The Hindu Bureau
NEW DELHI

Gas Authority of India Limited (GAIL) has about 1,500 km of natural gas pipeline under construction, which upon completion would expand its network to about 20,000 km, Deepak Gupta, Chairman and Managing Director (CMD) said at the company's AGM with shareholders.

"Our network now extends over 18,000 km, with nearly 1,500 km under construction. Upon completion of the ongoing project, the network will expand to almost 20,000 km," the CMD said.

Tulsin Kanta Pandey

Yamaha India eyes expansion as plants near full utilisation, sounds cautious on E2Ws

Balasubramanian G.P.
CHENNAI

Yamaha Motor India expects its combined production capacity in India to be fully utilised within the next two to three years, prompting the Japanese two-wheeler maker to evaluate expansion of its manufacturing footprint, even as it remains undecided on whether to set up a new plant.

The company currently has annual production capacity of nearly 1.5 million vehicles across its facilities in Kanchipuram, Tamil Nadu, and Marignol, Uttar Pradesh. The company is already in discussions with the government on expanding its manufacturing operations.

"Currently, my feeling is that within two to three years, this capacity is going to be utilised. In the future, we have to start something for the expansion of the quality and technical aspects," said Yamaha Motor India's managing director in Chennai, A. S. Sridharan.

The challenge is to improve quality while addressing cost. Mr. Sridharan said that Yamaha is looking to set up a plant where India has competitive advantage, he stressed.

Yamaha India currently has a roughly 70-30 split between domestic sales and exports. The company is shifting to an equal 50-50 split, which will be difficult given the size of the Indian domestic market.

The Yamaha YZF-R2, priced at ₹23,90,000 (₹23.9 lakh), while the YZF-R3, priced at ₹13,90,000 (₹13.9 lakh), is priced at ₹13,90,000.

The Hindu Bureau
HYDERABAD

Hyderabad-based Deepa Jewellers has set the price band for its initial public offering (IPO) at ₹168-177 per equity share, with the issue set to open on September 3 and close on September 3.

The IPO comprises a fresh issue of up to ₹280 crore and an offer-for-sale (OFS) of up to ₹18 crore equity shares by promoter shareholders.

The minimum bid lot has been fixed at 84 equity shares. At the upper end of the price band, investors need to commit ₹14,808 for one lot.

Contract research, development and manufacturing organisation CRIEMO Aragon Life Sciences has filed its Draft Red Herring Prospectus (DRHP) with SEBI for an initial public offering (IPO).

The proposed IPO comprises a fresh issue of ₹800 crore and an offer for sale (OFS) of up to ₹2,320,000 equity shares with a face value of ₹10 each, by existing selling shareholders.

The company plans to utilise the fresh issue proceeds primarily towards repayment and/or prepayment of borrowings.

Aragon Life Sciences has filed its Draft Red Herring Prospectus (DRHP) with SEBI for an initial public offering (IPO).

A.P. to become third subsea hub on data centre buildout

The State is witnessing investments from tech giants Microsoft and Google, which are building fresh subsea cable infrastructure, currently concentrated in Mumbai and Chennai

Aroon Deep
NEW DELHI

As a result of data-centre buildout in Andhra Pradesh and Telangana, the former's coastline will soon hold new landing stations for subsea cables, which connect global internet with India.

On one hand, Microsoft is participating in a consortium with firms like Lightstorm and Singaporean telco Singtel to land the 3,600 km India-Southeast Asia (I-2SEA) Submarine Cable System, and Google has the globe-spanning America-India Connect system, which will land in Visakhapatnam, where the tech giant's datacentre complex is being built.

"As part of this AI hub... we're bringing in multiple new subsea cables that will land on the coast of Andhra Pradesh around the Vishakhapatnam area," Alexander Smith, a Google executive who oversees several of the firm's physical infrastructure projects in the Asia Pacific region, told *The Hindu* in an interview on Thursday.

"That will mean that essentially India will have, after Mumbai and Chennai, a third digital international subsea gateway... connecting India directly with Southeast Asia, so Singapore and a couple of the other main markets, down into Australia and right around into the Middle East and Europe and

Network busy

A.P.'s coastline will soon hold new landing stations for subsea cables, which connect global internet with India

- Essentially India will have a third digital international subsea gateway connecting India directly with Southeast Asia

- Microsoft is part of a consortium with firms like Lightstorm and Singtel to land the 3,600 km I-2SEA Submarine Cable System

beyond. So this will... make India and Vizag in particular one of the most connected places in the world," Mr. Smith added.

Lightstorm CEO Amajit Gupta said in an interview with *The Hindu* in June that I-2SEA "connects South-east Asia, specifically Singapore and Malaysia, to the east coast of India," and that the cable system, which also connects to Chennai, "provides a brand new corridor to South Asia" from South East Asia, where a lot of infrastructure serving Indian enterprises and consumers continues to reside.

The cable system is set to be ready for service in Q4 2029. Mr. Gupta said that new cable buildout in a fresh location was key to preserving Indian internet connectivity from a strategic standpoint.

"If you peel the onion and look at the cables which connect the east coast of India... most of these are pretty old cables," he said. "They are easily about 8, 10, 12, 15

years old... [they] are filled with capacity and are also rapidly running into end of life." Mr. Gupta said that there were geopolitical de-risking tailwinds driving these investments. "I don't need to tell you what's happening in West Asia, which means people are beginning to think, hey, now this is getting so dangerous, why can't we flush the traffic out to the eastern coast of India so that at the least I have resilience and at the best I have an alternate path [in case connectivity is lost]."

On top of the subsea cable landing, both projects require significant infrastructure further inland. "This is a pan-India project," Mr. Smith said.

"We're needing to install and then light and operate thousands of kilometres of new fiber ... I think what's kind of underappreciated is that this will really create a robust new layer of digital connectivity... that will go between some of the mainline metros." Taking a cue from

landside fiber built on top of electrical transmission lines, Mr. Gupta said that Lightstorm is "likely to build a terrestrial corridor ... which will connect Machilipatnam to Mumbai, Hyderabad and similarly Chennai to Hyderabad and Mumbai with the same bandwidth".

"Fiber itself is out of stock across the globe," Mr. Gupta said, adding "including from Indian manufacturers. And then the fiber sub-components, the fiber raw material, the inputs are all in short supply. So that has never been the case for the last 10 to 15 years."

Google facility

Mr. Smith said that Google's Visakhapatnam facility will focus on inference, with no immediate plans for performing power-hungry training runs. He added that the firm was trying to acquire as much renewable power for the project as possible – pointing out that Google is among the biggest buyers of renewable energy in the world – and that water use minimisation was also on the agenda with air cooling technologies.

He added that the Google facility will focus on inference for domestic enterprises and government agencies, as there has been "pretty deep AI adoption across the delivery of government services at the State levels as well as Union level."

Topic	English	हिंदी
New subsea hub	Andhra Pradesh is expected to emerge as India's third major international subsea gateway , after Mumbai and Chennai.	आंध्र प्रदेश के मुंबई और चेन्नई के बाद भारत का तीसरा प्रमुख अंतरराष्ट्रीय subsea gateway बनने की संभावना है।
Location	New cable landing infrastructure is being developed around Visakhapatnam .	नया cable landing infrastructure विशाखापत्तनम के आसपास विकसित किया जा रहा है।
Why Vizag?	Its east-coast location provides strategic connectivity towards Southeast Asia and beyond .	पूर्वी तट की स्थिति के कारण Vizag को दक्षिण-पूर्व एशिया से रणनीतिक connectivity मिल सकती है।
Microsoft project	Microsoft is part of a consortium with Lightstorm and Singtel for the I2-SEA submarine cable system .	Microsoft, Lightstorm और Singtel के साथ I2-SEA submarine cable system में भाग ले रहा है।
I2-SEA length	The proposed cable is approximately 3,600 km long.	प्रस्तावित केबल लगभग 3,600 किमी लंबी है।
Energy requirement	Large AI/data-centre facilities require substantial electricity; Google intends to procure significant renewable power.	AI/data centres की बिजली मांग बहुत अधिक होती है; इसलिए renewable energy procurement महत्वपूर्ण है।

I2-SEA connectivity	It connects Southeast Asia, particularly Singapore/Malaysia, towards India's east coast.
Google project	Google's Americas-India Connect system is planned to land in Visakhapatnam.
Google data centre	Google is simultaneously developing a major data-centre complex in Vizag.
Expected timeline	The article says the I2-SEA system is targeted to be ready for service in Q4 2029 .
Domestic infrastructure	International cables require extensive inland fibre connectivity to distribute capacity across India.
AI connection	Google's Vizag facility is expected to focus significantly on AI inference .

यह दक्षिण-पूर्व एशिया, विशेषकर Singapore/Malaysia को भारत के पूर्वी तट से जोड़ता है।

Google का **Americas-India Connect system** विशाखापत्तनम में land करने की योजना है।

Google Vizag में एक बड़ा data-centre complex भी विकसित कर रहा है।

लेख के अनुसार I2-SEA system को **Q4 2029** तक service-ready करने का लक्ष्य है।

अंतरराष्ट्रीय केबलों के साथ भारत के भीतर व्यापक **terrestrial fibre network** भी आवश्यक है।

Google की Vizag facility का महत्वपूर्ण focus **AI inference** पर होगा।

What is a Submarine Cable?

Submarine/undersea fibre-optic cables are cables laid on the seabed that carry digital information between countries and continents.

समुद्र के तल पर बिछाई गई fibre-optic cables जो देशों और महाद्वीपों के बीच digital data का transmission करती हैं।

A simplified chain:

Global Internet

 Submarine Fibre Cable

 Cable Landing Station

Domestic Fibre Network

Data Centres / Telecom Networks

 Users

Important exam fact

International Internet connectivity depends heavily on **undersea fibre-optic cable networks**. Satellites are important, particularly for remote connectivity and resilience, but subsea cables form the backbone for enormous volumes of international data traffic.

Why Data Centres Need Submarine Cables

Think of it as:

AI boom

More computation

More data centres

Huge data movement

High-capacity fibre connectivity

Submarine cable investment

Therefore, the article is useful for **GS-III: Digital Infrastructure + AI + Cybersecurity + Energy**.

- Consider the following statements regarding submarine communication cables:
 - They use fibre-optic technology for transmitting digital information.
 - Cable landing stations connect submarine cable systems with terrestrial communication networks.
 - Submarine cables can contribute to the resilience of a country's international digital connectivity when routes and landing points are diversified.
 - Submarine communication cables are useful only for voice communication and cannot carry Internet data.
- Which of the statements given above are correct?
 - **A. 1 and 2 only**
 - B. 1, 2 and 3 only**
 - C. 2, 3 and 4 only**
 - D. 1, 2, 3 and 4**

India to Host 18th BRICS Summit — 2026

Point	English	हिंदी
Summit	18th BRICS Summit	18वाँ BRICS शिखर सम्मेलन
Host	India	भारत
Year	2026	2026
City	New Delhi	नई दिल्ली
Chair	India holds BRICS Chairship in 2026	भारत 2026 में BRICS की अध्यक्षता कर रहा है
Chairship began	1 January 2026	1 जनवरी 2026
2026 Theme	Building Resilience, Innovation, Cooperation and Sustainability	लचीलापन, नवाचार, सहयोग और स्थिरता का निर्माण
Importance	2026 marks 20 years since the first BRIC ministerial process began in 2006	2026 में BRIC प्रक्रिया की शुरुआत के 20 वर्ष पूरे होते हैं

BRIC → BRICS → Expanded BRICS

2001

Economist **Jim O'Neill** popularised the acronym **BRIC** for Brazil, Russia, India and China.

2006

BRIC cooperation began formally at the foreign-ministers level.

2009

First BRIC Summit — Yekaterinburg, Russia

2010/2011

South Africa joined → BRIC became BRICS

2024 onward

Major expansion of membership.

Original BRICS

B – Brazil BR

R – Russia RU

I – India IN

C – China CN

S – South Africa ZA

Members

-  [Brazil](#)
-  [China](#)
-  [Egypt](#)
-  [Ethiopia](#)
-  [India](#)
-  [Indonesia](#)
-  [Iran](#)
-  [Russia](#)
-  [South Africa](#)
-  [United Arab Emirates](#)

Dimension	Significance
Multipolarity	Provides India a platform to advocate a more representative international order
Global South	Strengthens developing-country participation in global governance
Financial governance	Supports reform of institutions such as IMF and World Bank
Development finance	New Development Bank provides an alternative/additional source of development finance
Trade	Promotes economic cooperation among large emerging economies
Energy security	Expanded BRICS includes several important energy producers
Climate change	Platform for sustainable development and climate-finance discussions
Technology	Cooperation in AI, digital economy, innovation and emerging technologies
Strategic autonomy	Allows India to cooperate across different geopolitical groupings

Feature

Established

Operational

Headquarters

Purpose

First President

Nature

Fact

Agreement signed in **2014**
2015

Shanghai, China

Infrastructure and sustainable-development financing

K.V. Kamath of India

Multilateral Development Bank

- **India's BRICS Chairships**

- India previously chaired BRICS in:

- **2012 → 2016 → 2021 → 2026**

- This is a straightforward factual area for competitive exams.

- India's 2026 chairship is especially significant because it comes amid an **expanded BRICS architecture** and heightened debate over reform of global institutions.

-

2026 Theme — Remember as RICS

The theme can be remembered through:

R – Resilience

I – Innovation

C – Cooperation

S – Sustainability

The official wording is:

“Building Resilience, Innovation, Cooperation and Sustainability.”

BRICS

Strong representation of emerging/developing economies

Strong Global South dimension

Includes China and Russia

New Development Bank

Diverse political/economic systems

Focus includes reform of global governance

G7

Primarily advanced industrial democracies

Predominantly Western advanced economies + Japan

Does not include China or Russia

No directly equivalent “G7 Bank”

More politically/economically aligned members

Major role in coordinating advanced-economy policies

Why Expanded BRICS is Significant

Expansion increases the grouping's:

Population weight

+

Energy significance

+

Economic influence

+

Global South representation

+

Geopolitical diversity

But enlargement also creates challenges:

**More members → More diverse interests → Harder
consensus-building**

This gives a strong main argument:

-
- **Challenges for India within BRICS**
 - **China factor**
 - China's economic weight within the grouping is substantially larger than India's.
 - **India-China differences**
 - BRICS cooperation exists alongside unresolved bilateral strategic issues.
 - **Russia-West tensions**
 - India must balance its strategic relationships with Russia, the U.S., Europe and other partners.
 - **Expanded membership**
 - More members make consensus increasingly complex.
 - **Institutional effectiveness**
 - Declarations must translate into measurable cooperation.
 - **Strategic autonomy**
 - India participates simultaneously in BRICS and forums such as the **Quad and G20**, reflecting issue-based partnerships rather than rigid bloc politics.

-
- Consider the following statements regarding BRICS:
 - India holds the BRICS Chairship in 2026.
 - The first BRIC Summit was held in Russia.
 - The New Development Bank is headquartered in Shanghai.
 - Indonesia is a member of BRICS.
 - Which of the statements given above are correct?
 - **A. 1 and 2 only**
 - B. 1, 2 and 3 only**
 - C. 2, 3 and 4 only**
 - D. 1, 2, 3 and 4**

US FDA Approves Daraxonrasib for Pancreatic Cancer

Topic	English	हिंदी
Drug	Daraxonrasib	डारैक्सोनरासिब
Brand name	RASONQUE	RASONQUE
Approved by	U.S. Food and Drug Administration (FDA)	अमेरिकी खाद्य एवं औषधि प्रशासन (FDA)
Approval date	26 August 2026	26 अगस्त 2026
Disease	Metastatic pancreatic adenocarcinoma	मेटास्टेटिक पैक्रियाटिक एडेनोकार्सिनोमा
Drug type	RAS inhibitor	RAS inhibitor
Administration	Oral tablet, once daily	प्रतिदिन एक oral tablet
Developer	Revolution Medicines	Revolution Medicines
Major trial	Phase III RASolute 302	Phase III RASolute 302
Trial participants	500 patients	500 मरीज
Median overall survival	13.2 months vs 6.7 months with standard chemotherapy	13.2 माह बनाम 6.7 माह standard chemotherapy
Median PFS	7.2 vs 3.6 months	7.2 बनाम 3.6 माह
Objective response rate	30% vs 11%	30% बनाम 11%

- **Traditional approach**

Cancer → broadly acting chemotherapy → healthy + cancer cells affected

- versus

- **Targeted therapy**

Cancer → identify molecular driver → inhibit specific signalling pathway → suppress tumour growth

- **What is Pancreatic Adenocarcinoma?**
- The **pancreas / अग्न्याशय** is located behind the stomach and performs both:
 - **Exocrine function → digestive enzymes**
 - **Endocrine function → hormones such as insulin and glucagon**
- **Pancreatic ductal adenocarcinoma (PDAC)** arises from cells associated with the pancreatic ductal system and is the dominant form of pancreatic cancer.
- **Metastatic cancer** means:
 - **Primary tumour in pancreas → cancer cells spread → distant organs/tissues**
- Hence, metastatic PDAC is an advanced-stage disease.

PANCREATIC CANCER

Phase	Main purpose
Pre-clinical	Laboratory/animal studies
Phase I	Safety, tolerability, dosage
Phase II	Preliminary efficacy + safety
Phase III	Large-scale comparison to establish efficacy/safety
Regulatory approval	Regulator assesses evidence
Phase IV	Post-marketing surveillance

- 
- **Consider the following statements:**
 - Daraxonrasib is a RAS-targeted therapy.
 - KRAS belongs to the RAS family.
 - Daraxonrasib was approved by the U.S. FDA for metastatic pancreatic adenocarcinoma under specified eligibility conditions.
 - FDA approval automatically constitutes marketing approval for the same drug in India.
 - Which of the statements given above are correct?
 - **A. 1 and 2 only**
 - B. 1, 2 and 3 only**
 - C. 2, 3 and 4 only**
 - D. 1, 2, 3 and 4**

Word of the day

Impetuous: characterised by undue haste and lack of thought or deliberation

Synonyms: impulsive, adventurous, fearless

Usage: His impetuous decision to quit his job surprised everyone.

Pronunciation: newsth.live/impetuous

International Phonetic Alphabet: /ɪmpetʃuəs/

Thank you ☺
